FIND YOUR CALLING

## Choose to Protect Our **Cyber World**

If you think about it, all our digital strides could come to a halt if a simple attack can cripple them. So, strengthening the security and resiliency of cyberspace is an important endeavor. One that has other advantages too!

### **But first, why is cyberspace so hard to protect?**

The age of remote and roaming work that places users and assets in many locations. The ability for malicious actors to operate from anywhere in the world. The linkages between cyberspace and physical systems. And the prominent use of the cloud from huge multinationals to solo individuals like you.

When you put all this together, this is a tough assignment. And an exciting one.

### **Advantages of a cybersecurity profession.**

Those who know the industry best, have come up with these reasons to consider cybersecurity as a career:

- ✓ Has something for everyone
- ✓ There's a high need for skilled cybersecurity professionals (3.12M jobs remained open at the end of last year)
- ✓ You'll never be bored
- ✓ It's a team sport
- ✓ You get to solve problems and develop unique solutions
- ✓ You can make a difference in the world

### **Can you see yourself in this role?**
